

Biohazard Acknowledgement Form

The AIMS Mass Spectrometry Laboratory has no Biocontainment Level designation as defined by the Canadian Biosafety Standard 2nd Edition, 2015 (<https://www.canada.ca/en/public-health/services/canadian-bio-safety-standards-guidelines/second-edition.html>). Therefore, all samples of biological origin must be free from pathogens and be inactivated prior to submission for analysis. The purpose of this form is to capture relevant project information relating to all samples entering the AIMS Laboratory of biological origin and to delineate appropriate sample pretreatment procedures to be followed for biohazard inactivation.

Biosafety Certificate Number (if applicable): _____

Biological samples used:

Inactivation Protocol used for biological agents:

Principal Investigator
